

## Meeting Minutes 12/5/14

1:06 Meeting convened

Vivek: how was your project, how was the experience? Demo?

Anji: Sure! Two types of users, we have some premade accounts. So we log in, here we can see the template shifts. I can make a manager or employee. It sends my login information via email. If I go home, this is where the permanent shifts are. Shifts are recurring. Example of shift assigning to John. We're doing three weeks in advance generation of shifts.

Vivek, Cynthia: various questions

Vivek: how does shift generation work on backend?

Anji: explanation

Vivek: Cool

Anji: Since I'm a manager I can see different schedules. Cook, delivery.

Lily: to add a new role, just click the plus button.

Anji: so to add a TA shift, have to make a TA.

Vivek: can we see shift swapping? Difference between up for grabs, up for swap?

Anji: explanation. Demo of up for grabs, swap.

Vivek: nice. Did that all propagate to database?

Lily: just not socketed. Have to refresh.

Vivek: I might make a user account but should be straightforward.

Anji: overview of README

Vivek: is possible to give up a template?

Lily: no. Manager has to delete and recreate. Wanna see tests?!?!?

Vivek/Cynthia: Sure!

Vivek: what was the challenge of writing tests?

Lily: explanation of setting it up. That was frustrating. There were some race conditions in the tests.

Vivek: Cool cool cool. Do you guys want to make changes before submitting?

Lily: some small things, but not major features. e.g. emailing managers 24 hours in advance if shift up for grab. Explanation of cron implementation.

Anji: we're also making some UI changes.

Vivek: This is awesome. Good way of doing things. I don't really have anything else.

Cynthia: Yeah.

Vivek: did you guys think of a dashboard?

Lily: explanation of implementation of dashboard.

Cynthia: not sure if you can do it, but maybe you can have a link from record on dashboard to calendar with relevant time highlighted?

Vivek/Cynthia: discussion of features you might do if you had more time. e.g. bulk updating of shifts.

Vivek: good job on a tough problem.

Anji: tough problem.

Cynthia: possibility of putting dashboard and calendar on same page? I think it would be easier to see the dashboard.

Vivek: how might you implement bulk updating?

Anji/Lily: discussion.

Vivek: it's fine, we understand the limitations. We think you're good to go for demo.

Cynthia: 5 minute demo. Either video or live. Walk through your app.

Anji/Lily: discussion of how to present.
